WI-FI AT HOME, 4G ON THE GO

How to use your cameras at home and at shows, without wasting data.

At home your cameras run on your **own Wi-Fi**, and the 4G router simply stays **off**. Off to a show, clinic or another yard? Take the router and cameras along and switch them on there. That's all.

At home

Router off · cameras on home Wi-Fi · phone on home Wi-Fi

On the go

Router on · cameras connect by themselves · phone Wi-Fi OFF

- 1 Pack up.** Take the 4G router, the cameras you want to use there, and the chargers or power bank. Charge the router and cameras fully at home.
- 2 On site: router on first.** Wait until the display shows it's connected (bars and the network name).
- 3 Then switch on the cameras.** They connect to the router by themselves. After about a minute you'll see the image in the Tapo app, just like at home.
- 4 Turn off Wi-Fi on your phone** while the router is on. Otherwise your phone goes online via the 4G router and uses the data on your SIM card, especially with videos and social media.
You watch over your own phone's 4G; that uses none of the router's data.
- 5 Back home?** Router off, Wi-Fi on your phone back on. The cameras reconnect to your home Wi-Fi by themselves.

STEP 2 · ROUTER CONNECTED

Bars, battery level and network name on the display: the router is ready.

PACKING CHECKLIST

- ☐ **4G router**, charged
- ☐ **Cameras** for the site, charged
- ☐ **Chargers / power bank** and cables
- ☐ **Brackets or magnetic bases** for mounting
- ☐ **Data check:** enough data on your SIM card? See prepaid.horse-watch.nl

Not taking every camera?

No need. Cameras left at home keep running on your home Wi-Fi. Only switch on the cameras you take with you.

Phone on the router = data gone

Your phone automatically picks a known Wi-Fi network, even if it's now the 4G router's. Keep Wi-Fi off while the router is on, and your data stays for the cameras.
